# Introduction

Descartes Forwarder Enterprise & OneView solutions have the capability of tracking client shipments via the Internet. Through a link, <u>http://track.ies.descartes.com</u>, on your Web site to ours, your customers are able to locate shipment status, print documents, update information and request bookings. In order to take advantage of this service, please contact IES and speak to our knowledgeable sales staff.

#### Accessing & Using Web Tracking

To access Web Tracking, open a Web browser (i.e. Microsoft Internet Explorer, Google Chrome, Mozilla Firefox, etc.) and log onto <a href="http://track.ies.descartes.com">http://track.ies.descartes.com</a>. This will open the Login screen:

The login screen is provided for security and customization. Each Web Tracking customer is given a three-digit number code for logging into the system. When logging in, the client merely enters the three-digit number plus the Client ID from the Forwarder Enterprise & OneView database (for example: 444SHIPPER). The three-digit code does not change for each client. This login name is also used as the password, but can be edited later for security.

Once the login and password are entered, click the Login button. The client will then be taken to the main Web Tracking search screen:

🧐 web	tracking®					сниск

Value:		Commodity:	Origin:		Status:	Requires Module -	•
Date Type:	ETA 🔻	Consignee:	Country:	T	Layout:	CHB TEST	۲
		Pieces:	Destination:		Max Records:	1000 (DEFAULT)	۲
Dates From:				•		Browse	•
Dates From: Dates To:		Carrier:	Country:		Output:		

This Web Tracking screen can be customized depending on the customer's preferences. A company logo, company colors and welcome message can replace the default branding shown above.

#### **Tracking Shipments**

The main Web Tracking page allows users to search shipments separately from equipment or order numbers. Search capabilities have been expanded and separated rather than grouped into one multi-purpose search engine. When first logging into Web Tracking, the main screen defaults to the Shipment search filter. To search for a particular shipment, enter the search criteria within the first tab:

arch Options						
Search by:	File #	Shipper:	Reference:		Module:	All
Value:	123456	Commodity:	Origin:		Status:	Requires Module -
Date Type:	ETA 🔻	Consignee:	Country:	•	Layout:	CHB TEST
Dates From:	04/01/2014	Pieces:	Destination:		Max Records:	1000 (DEFAULT)
Dates To:	05/19/2014	Carrier:	Country:	•	Output:	Browse
Dates To: te Formats: 01/10/20	05/19/2014	Carrier:	Country:	•	Output:	Browse

The Shipment Search screen allows users to search by different reference numbers (i.e. File Number, Master Bill, House Bill, P.O. Number, etc.). The user can enter a specific date range, filter by module (Import, Ocean Export, etc.) or search for a certain shipper, commodity, or consignee. Sort and layout options give flexibility on data presentation. When finished entering any desired search filters, click the "Search Shipment(s)" button.

Once the search results appear, the user is given a listing of all files pertaining to the search criteria entered.

arch Results

After clicking on the Documents tab, the user is given an option to print available documents (according to Truvis imaging permissions) from a convenient list. Once a document is selected, the user can click the View link to display the document. When the client clicks on the View button, Adobe Acrobat Reader is automatically launched and the document (i.e. Air Waybill, B/L, etc.) is displayed on the screen.

If the client has proper security permissions, they can print documents from the new tab that opens, using Adobe Reader. After printing, the client would then close the Adobe Reader browse tab to continue using Web Tracking.

#### **Customizing Search Results View**

In addition to utilizing the search fields to retrieve data, that data is able to be organized in the results view. The column headings produced in the search results can be customized to allow users to see only relevant column headings as well as re-arranging the column headings. This customized view can be created through the Admin tab.

# Conclusion

Web Tracking provides customers with an opportunity to track shipment information online, manage search layouts, and generate reports with search results. Users are able to drill down the data returned from initial searches by general shipment information, cargo information, AES ITN, and other options. Customers are also able to view any documentation that is set up through Truvis to publish online. Documents made available online can be viewed and printed.
